ELARA™ COSMETIC COLORANTS

Colorants for water, oil and solvent based systems

Elara colorants are designed for use in a wide range of formulations, from water-based and oil-based to even more demanding solvent-based systems. They perform well in all types of personal care products, from lip gloss and lip sticks to lotions and soaps.

Elara™ offers a significant improvement in lightfastness, averaging 2.5 times better than previous fluorescent colorants. They employ a revolutionary new thermosetting polymer component that is resistant to solvents commonly employed in nail enamels and hair sprays. Furthermore, because of the cross-linked nature of these materials, formulations can be processed at higher temperatures without adverse effects or migration of color.

Density: 1.18g/cm³
Bulk Density: 0.36g/cm³ (22.5 lbs./ft³)
Particle Size: 2.5 microns (average)
Oil Absorption: 60 lbs. of oil/100 lbs. of pigment

Optical brightener additive for cosmetics - EL-00 Fluorescent Illuminator

Combining an optical brightener with DayGlo's Elara™ polymer technology creates this exciting optical effect additive. This unique product provides the fluorescent effects of an optical brightener without the staining or dispersion problems often associated with brighteners. EL-00 can be used to enhance brightness of formulations, as a soft focus effect filler or simply to add fluorescence to an existing formulation.
